Returning to the Community

The ability to return home, or to a home-like setting, is the primary goal of inpatient rehabilitation. A high rate of return to the community means that most people progress enough to return home and that families and caregivers are trained to provide any needed care.

Sutter Rehabilitation Institute’s rate of return to the community is 85%, compared to the national benchmark of 72%.

Patient Satisfaction

Our patients express great satisfaction with the rehabilitation and care provided at Sutter Rehabilitation Institute.

95% of patients who responded to the survey said they were satisfied or very satisfied with their rehabilitation program.

96% of respondents said they would recommend Sutter Rehabilitation Institute to others.

Readmission to an Acute Hospital

Sometimes a change in a person’s medical condition requires an admission to an acute hospital for further medical care. In 2019, 5.4% of patients from Sutter Rehabilitation Institute were admitted to an acute hospital due to a change in medical condition, which is well below the state benchmark of 10.1% and the national benchmark of 11.9%.

Follow Up

People discharged from Sutter Rehabilitation Institute receive a follow-up call to check on their well-being and reintegration into the community. Of the people who responded to the survey last year:

- 100% were still living at home or in a home-like setting.
- 89% had not been hospitalized since their discharge.

Their ability to participate in the community was rated at 3.2 on a scale from 1 to 4. (National benchmark is 3.0).
